C/C++, C#, Python, HTML5, CSS, PHP, JavaScript, x86 Assembly

Environments & Programs

Linux/Unix and Terminal, Windows, MySQL, GitHub, Microsoft Office, Node.js (Express), Heroku, Bootstrap Styling

PROJECTS

SkiU – University of Colorado Boulder, 2017

Front-End Design & Development

SkiU is an innovative and unique platform that helps students rideshare to and from local ski resorts in Colorado. I was responsible for the websites front-end design, deploying the site of Heroku, and implementing Express.js framework. My role in this project also included collaborating with the rest of the team to establish goals and set milestones. I achieved this by creating the project's GitHub page and creating Milestones on our Trello board.

Personal Website, 2017

(johndallasphillips.com)

I created my personal website in order to practice my web development abilities and establish an online presence. The site was created using JavaScript, CSS, and HTML5 with bootstrap styling. My website uses minimal back end functionality, but will be added as needed throughout my career.

QUEST, 2017

QUEST is a text based choose your own adventure game made in C++. Made to demonstrate my knowledge of data structures. The game is designed using a graph, where the shortest path among them is the solution. While creating the game I learned the importance of planning before starting any project. I rebuilt the game a second time with goals and functions already outlined, making the process faster and more efficient.

WORK HISTORY

Brooklyn Pizza – Boulder, CO

August 2016 – September 2017
